Product Showcase

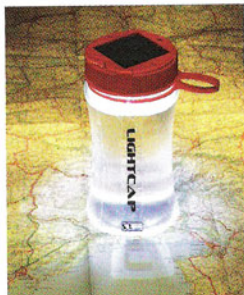

Simply Brilliant

The ShockStrap combines a double loop of tough shock-cord encased in sun-protective nylon webbing with a strong nylon strap. The versatile tie-down adjusts from 24 inches to 60 inches and has a marine-grade anodized 600# test carabiner on each end. To secure loads, just wrap the stretch end of the ShockStrap around any rack, throw it over your load and clip the other end back around itself. The product's StrapWrap system enables users to quickly gather the loose end of the strap under a cord lock system that keeps it from flapping in the wind. ShockStraps are available in four colors (blue, red, silver and black) and are sold separately (MSRP: \$16.95) or in two-packs (MSRP: \$32.95). 888.557.6464 or www.shockles.com

SolLight

The patented LightCap combines a polycarbonate water bottle and a sealed, solar-powered LED light in the cap. The LightCap can be used as a tent lantern or even a flashlight by holding onto the middle and aiming the bottom out. Simply set it in the sun (or hang it from your pack when hiking) to allow it to charge. The product features a switch for both a red bulb (preserves night vision) and white bulb (bright enough for reading). The LightCap provides up to six hours of illumination, with the bulbs guaranteed for 20,000 hours and the charging system for 500 cycles. The cap includes a sealed solar panel and rechargeable light circuit and weighs only a few ounces more than a regular cap, according to SolLight. MSRP: \$24.95. 888.557.6464 or www.sollight.com
