HOLIDAY GIFT GUIDE

Light Attaches to Rails

The Raillight is a solar-powered LED light that can be clamped to a rail, steps, a ladder, a table or wherever a light is needed on the outside of an RV or at a campsite. The Raillight is equipped with a clamp that adjusts up to two inches. The sealed epoxy sheds coated stainless housing sheds water, and the dual LEDs are rated for over 10,000 hours. No batteries or cords are needed.

A built-in sensor automatically turns the light off during daylight, and there is also a switch to turn off the light at night. The light will glow for up to eight hours with a full charge of sunlight, and can be seen up to a quarter-mile away, making it useful in an emergency. The light is priced at \$27.95 and is a product of Sollight, P. O. Box 856, Hood River, OR 97031. For information, call (888) 557-6464 or visit www.sollight.com.
