WATCH FOR

LIGHT UP YOUR LIFE

From longtime *WindSurfing* contributor Eric Sanford comes the Lidlight, the world's first and only solar-powered LED light system built specifically for car-top boxes, truck toolboxes and anything with a tilting lid. Easy to install, the Lidlight is sleek — protruding only an inch on each side — and efficient, capable of producing light after just one hour in the sun. And get this: It's automatic — an internal tilt switch turns it on whenever the box is opened, and five super-bright LEDs will light up your stuff without shining in your eyes. sollight.com
